

# PROJECT MANAGER

## **The role :**

The purpose of the role is to research, help shape, plan & deliver assigned projects, with complete functionality, in the agreed time frame.

## **Responsible :**

- Work with the CTO, CEO & and other stakeholders to understand the functionality, why it is there, what it does for the client and how it works.
- With the development team planning out the stages of develop, ensuring that the development follows best practices and the dependencies are worked out
- Make sure every detail is on the Click up board, and that tasks are presented in a logical way with the information required to complete the project, using a SMART methodology.
- Map out the milestones of the project, work with the lead developer to ensure that the milestones are hit, by assignment of resources and holding people accountable
- Ensure deliverables are on time and do not impact on dependencies, chasing up those who need to deliver
- Manage the testing team to ensure that both the software works as expected and that there is a robust testing process which challenges the team to find bugs and inefficiencies.
- Understand security best practice and ensure these are applied

## **Applicant Requirements :**

- Experience of software development for commercial applications
- High level of English required

At some point in the future, look to see how the services can be developed to increase the value we offer to clients.

To achieve this, you may need to

- interview/survey clients
- talk regularly to sales, onboarding and support to find from them feedback from clients
- follow developing trends in the industry
- Compare our product offering to competitors to ensure that we able to compete
